73%

Illustrative overall safety score

Tier II

Illustrative risk classification

4

Priority remediation controls

Executive Summary

Stable behavior appears in low-volatility interactions, while escalation pathways show higher interruption and routing risk. Current profile supports controlled rollout with remediation and re-test gates before broad deployment.

What Leadership Receives

- â€¢ Executive risk summary for board and procurement review
- â€¢ Severity classification with threshold language
- â€¢ Scenario findings appendix (engagement package)
- â€¢ Remediation roadmap and re-test recommendation

Boundary Note

Not public: exact scenario text, rubric mechanics, client-identifying evidence, and organization-specific confidential findings.
